Water main work on Central Entrance, northbound lanes reduced to single lane

[Duluth, MN] - The City of Duluth has identified a water main leak on the north bound lane of Central Entrance, between Blackman and Stroll Avenues. City crews are on site to assess the leak and make necessary repairs this afternoon. The work will require that a northbound lane be closed, leaving a single lane for traffic to pass.

There is no estimated completion time at this point and staff will attempt to undertake repairs without any disruption to water service.

The City advises motorists to use caution and watch for work crews in the impacted area.
